

Connecting your ideas to the internet of things.

Our Design Thinking offerings are built to accommodate your organization's needs.

We take into account your end solution requirements, and meet you where you are in your development efforts: from product conception to the architectural layout of the solution.

IoT 101

This is a group starter course, held to educate on IoT as a general subject as it pertains to various industries and business functions. This 1 hr "class" will at times even focus in on particular topics within the IoT space, including product security and data monetization.

Ideation Consulting

A personalized, half day session where our solution consultants and design leaders will meet to discuss your particular business case with your team. A high level roadmap will be the end product of this session.

Design Thinking Workshop

2-3 day engagement where your team will be guided through a series of exercises to validate and develop a user-centric solution that our team will produce a prototype of as a deliverable.

We are an IoT Systems Innovator, providing end-to-end IoT Solutions.

ClearObject enables innovation by bridging the gap between a customer and their preferred platform with custom solutions and continued management.

Our team of solution experts work to create a data product that compliments the "thing" your organization already produces. This provides your company with a real differentiator in the marketplace while maximizing the potential of an IoT solution connected to your network.

Our development process is infused with Design Thinking Methodology so that the end solution is designed to incentivize use, maximize efficiency, and delivery quick ROI from your improved data collection process or new data product.

ClearObject ensures a user-centric, data driven solution by developing with your end-user in mind.

Our Design Thinking Workshop focuses on user friendly, effective solutions hosted on world-class platforms so you can access your data easily and efficiently.

Our dedicated solution team is comprised of engineers, developers, designers, project managers and IoT solution managers. They will work to better understand your project outcomes, the end user needs, and develop solutions that improve your product with quick ROI and wide-scale adoption.

IoT connects every "thing", so we can work across any industry:

- Automotive
- Energy
- Manufacturing
- Housing Development
- Food Services
- Operations/Distribution
- Agriculture
